INDIGO PET PHOTOGRAPHY

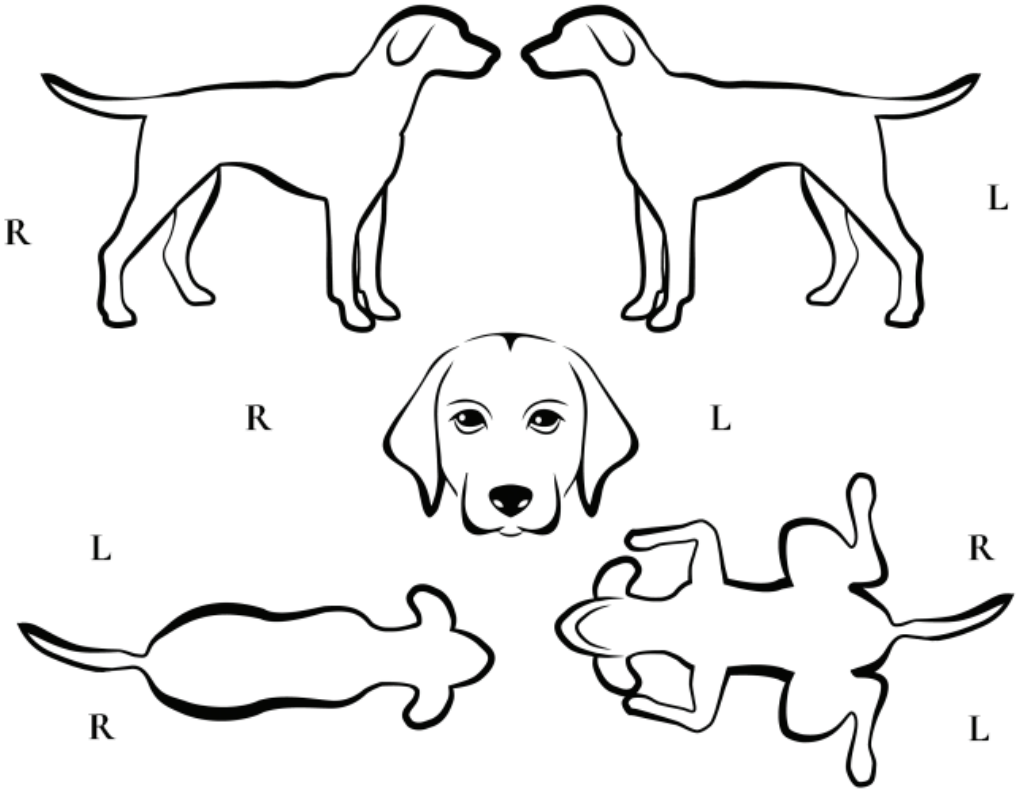

Dog Body Map

A simple way to keep track of lumps, bumps and changes.

See your vet sooner rather than later if a lump feels hard or fixed in place, or if you notice hair loss, bleeding, redness or rapid growth. Bring this page to each vet visit, or send a photo of it ahead of time.

How to use it

1. **Find it.** Spot a lump or bump? Mark where it sits on the diagrams below with a small circled number.
2. **Describe it.** Is it soft or firm? Does it move freely or feel fixed in place? Note anything you see on or around it.
3. **Compare it.** Size it up against something familiar, like a pea, blueberry, grape, walnut or plum.
4. **Record it.** Add the date, number and details to the chart, and check back every few weeks.

DATE	NO.	SIZE AND DESCRIPTION	VET COMMENT

General guidance only. Your vet knows your dog best.
